

Epic Sum Up 3.10

Summary Panel per Issue Type

Now different summary panels can be configured per issue type. This works for the project configuration as well as the global one. Please keep in mind that you still have to activate the summary panel for these issues in the general settings.

The screenshot shows the 'Summary Panel Configurations per issue type(s)' interface. At the top, it lists the selected issue types: 'ESU Container', 'Story', and 'Task'. Below this, there is a section titled 'Summary Panel' with a description: 'Define which fields are displayed in the Summary Panel and adjust them.' A list of fields is shown, each with a drag handle on the left and a trash icon on the right. The fields are: 'Time', 'Status Category', 'Completed Issues', 'Version Date', 'Attachments', and 'Comments'. A 'Save' button is located at the bottom left of the configuration area.

Calculated Progress bar

To improve the reporting options, we've added a new custom progress bar that can be calculated based on simple values.

The screenshot shows the configuration for a 'Calculated Progress bar'. The configuration is for the 'Personnel costs' field. It includes a 'Description' field with the value 'Personnel costs'. Below this, there are three dropdown menus: 'Value' (set to 'Custom value'), 'Operator' (set to '*'), and 'Value' (set to 'Time Spent'). A 'Custom value' input field contains the number '50'. There are two toggle switches: 'Include Container' and 'Include Subtasks', both of which are turned on. At the bottom, there is a 'Default detail view column layout' dropdown menu set to 'Choose column layout'. The interface also shows the 'Summary Panel Configurations per issue type(s)' header and the selected issue types: 'ESU Container', 'Story', and 'Task'.

Default Detail View Editor Layout per progress bar

Default Detail View Editor Layouts can now be chosen per progress bar.

The screenshot shows the configuration interface for the Default Detail View Editor. On the left is a sidebar with navigation options: View log, Thread Dump, MULTI TIME TRACKER, Settings, EPIC SUM UP, Get started, and Configuration (highlighted). The main area has tabs for General settings, Summary Panel (selected), and Custom Fields. A 'Download support file' link and a 'Do you need help with the configuration?' link are in the top right. The 'Summary Panel' section includes an 'Add field' button and a description: 'Define which fields are displayed in the Summary Panel and adjust them.' Below this are several sections: 'Time' and 'Story Points' with trash and expand/collapse icons; 'Include Container' and 'Include Subtasks' with toggle switches; 'Default detail view column layout' with a dropdown menu (highlighted with a purple box) showing 'Projectmanagement'; 'Budget' with a dropdown menu showing 'Budget'; 'Attachments' and 'Comments' with trash and expand/collapse icons. At the bottom, there is a 'Summary Panel Configurations per issue type(s)' section with an 'Add' button.

Huge performance improvement

In Epic Sum Up 3.8, we've made a major performance upgrade for Epic Sum Up. Now we've added a huge performance enhancement on top. Loading times were sped up 10 times. This makes working with a huge amount of issues in large Data Center instances even faster.
